ChargEV FleX

**FACT SHEET**
As of November 2026

# Charge wherever you like: simple, transparent and independent of the operator.

ChargEV FleX is the iPhone app from EV Freaks GmbH that lets EV drivers charge and pay at public charge points in Germany. No customer account, no subscription, no contract, and the price is on the map before you plug in.

**140,000+**
charge points in Germany, via roaming

**0 €**
base fee, no account, no subscription

**1 PDF**
invoice per charging session

**iOS 18.4+**
iPhone and iPad, with CarPlay

## AT A GLANCE

| | |
|---|---|
| **Provider** | EV Freaks GmbH, Schwäbisch Hall, Germany. Maker of the charging-station app chargEV, and with ChargEV FleX an e-mobility provider in its own right. |
| **Availability** | Free on the App Store for iPhone and iPad, iOS 18.4 or later. Charging is currently available in Germany, more countries are planned. |
| **Coverage** | More than 140,000 charge points through roaming, including EnBW, IONITY, Pfalzwerke, EWE Go, Allego, Electra, autostrom.plus, E.ON, Aldi Süd and Lidl, plus many small regional operators. Coverage keeps growing. |
| **Payment** | Apple Pay or credit card, every session paid on its own. Apple Pay adds convenience but is not required. |
| **Pricing** | No tariff of its own: prices follow the operator's, dynamic ones included, from 15-minute slots to day and night rates. The markup is variable, so cheap stations stay cheap. Operator start and blocking fees are passed on unchanged. |
| **Transparency** | The price per kilowatt-hour is on the map. Time components and fees are itemised in the station details and on the invoice. |
| **Invoice** | A PDF invoice after every session, with an editable recipient, for company cars for example. No monthly statements. |
| **Filters** | By charging type (AC, DC/HPC), price, operator and connector, freely combinable, savable as presets and available in CarPlay. |

> “What’s on the map is what’s on the invoice. A price you see beforehand is a decision, not a surprise.”
